WORK EXPERIENCE

PT Bluebird Group - IT Application Developer — Mar 2023 - Present

- Designed and developed scalable RESTful APIs for the E-Timesheet Service, an API middleware integrating Portal Timesheet with SAP, covering driver contract, driver timesheet, and Driver SIO (Surat Izin Operasi) data to improve HR and operational data accuracy.
- Built and maintained the Talenta Receiver Service, an API middleware integrating Talenta (external HR platform) with SAP, handling driver shift schedules, overtime, and time-off data with reliable background processing.
- Engineered the Journaling Service, an internal finance application to record and manage transactions from multiple payment gateway platforms, improving financial tracking accuracy and reducing manual reconciliation.
- Designed backend service flows and background processing for high-volume data integration systems, ensuring reliability, scalability, and fault tolerance.
- Optimized SQL queries and implemented fault-handling mechanisms, improving API performance and stability under high-load conditions.
- Collaborated with cross-functional teams (business, QA, SAP) to design system architecture and deliver features iteratively using Agile/Scrum methodology.

PT Bank Raya - Backend Developer — Mar 2021 - Feb 2023

- Designed and developed RESTful APIs for the BI-FAST middleware service using .NET Core and SQL Server, enabling secure real-time integration across web and mobile banking applications.
- Implemented backend service flows for interbank fund transfers, supporting over 1,000 daily transactions with a strong focus on data consistency, validation, and reliability.
- Collaborated with cross-functional teams to integrate frontend and backend components, ensuring low-latency and seamless real-time transaction experiences.
- Optimized SQL Server queries and backend logic to improve transaction performance and maintain system stability under peak usage.
- Developed and maintained a Card Management System using .NET Framework Web Forms and SQL Server, supporting daily operations for 5,000+ active cardholders through automated issuance and status tracking.
- Used Git-based workflows and team collaboration practices to streamline development, improve code quality, and support faster release cycles.

PT Bayer Indonesia - IT Application Developer — Apr 2019 - Feb 2021

- Developed and maintained enterprise web applications using .NET C#, SQL Server, Laravel, and Bootstrap, supporting multiple internal business processes.
- Optimized database design and backend workflows for the Credit Management system, reducing processing errors by 40% and improving overall system reliability.
- Improved mailing and approval workflows by resolving critical backend issues, resulting in faster approvals and reduced operational bottlenecks.
- Collaborated closely with business stakeholders to gather requirements and translate them into backend solutions, contributing to the successful delivery of 5+ internal applications.
- Provided application guidance and user training to improve system adoption and reduce support requests by over 25%.
- Enhanced HR-related web applications in collaboration with external vendors, improving system performance and cross-departmental data flow.
- Developed and optimized the E-Management of Change (E-MOC) application, increasing documentation and approval efficiency by approximately 30%.

Thortech Asia - Web Developer **Apr 2018 - Apr 2019**

- Developed and maintained web applications using Laravel, MySQL, JavaScript, Bootstrap, and AJAX, supporting internal business operations across multiple departments.
- Designed and implemented RESTful APIs for the Kirimkanai mobile application, enabling secure transactions for 1,000+ active users and seamless integration with admin systems.
- Built backend services for Kirimkanai admin tools, improving transaction monitoring, reporting, and operational visibility, resulting in a 25% increase in administrative efficiency.
- Developed core features for the Gapallan Web Application, a logistics and ship maintenance management system, reducing manual data entry by approximately 40% and improving operational turnaround time
- Collaborated with product and operational teams to gather requirements and deliver full-stack features aligned with business needs.

SKILLS

- **Backend:** .NET Core • C# • ASP.NET • gRPC • RESTful APIs • PHP • Laravel • Microservices • API Gateway • Clean Architecture • Background Services • Golang
- **Frontend:** React.js • Bootstrap • HTML • CSS • JavaScript • Material UI
- **Databases:** SQL Server • MySQL • Relational Database Design • Query Optimization
- **Tools & DevOps:** Git • GitHub • GitLab • Postman • Jira • Docker • CI/CD • Jenkins
- **Other:** Agile/Scrum • SAP Integration • API Documentation • Claude Code • Agentic AI

PROJECTS

StockLedger – Inventory & Financial Management SaaS

Tech Stack: .NET 8 • .NET Core Web API • Blazor • MySQL • Clean Architecture • Docker

A multi-tenant inventory and financial management SaaS built with .NET 8, Blazor, MySQL, and Clean Architecture, featuring inventory management, accounting, RBAC, and scalable RESTful APIs.

GitHub: https://github.com/mpuntodewof/StockLedger

Daily Habit Tracker

Tech Stack: .NET Core • ASP.NET Core Web API • React.js • Material UI • SQL Server • Docker

A full-stack habit tracking application built with ASP.NET Core, React.js, SQL Server, and Material UI, featuring JWT authentication, habit management, reminders, and progress tracking.

GitHub: https://github.com/mpuntodewof/DailyHabitApps

Meal Planner Application

Tech Stack: React.js • TypeScript • Material UI • .NET Core • MySQL

A full-stack meal-planning platform with AI-assisted recipe generation, nutrition estimation, and a behavior-analytics dashboard. Users plan weekly meals, build recipes (by hand or via an LLM), auto-generate shopping lists, rate and favorite recipes, and see how their planning habits trend over time.

GitHub: https://github.com/mpuntodewof/Meal-Planner-Apps

EDUCATION

Mulawarman University **2013 Sep - Mar 2018**

Bachelor Informatics Engineering
